Why the MVM?
- Wide selection of courses with lecturers who are leaders in their field
- Gain a formal qualification through study while you work
- Face-to-face on-campus workshops
- Extensive support for distance students from Massey University and the MVM team

Flexible distance learning – how it works
Online classrooms bring our lecturers’ expertise to you. A range of modern online tools support your study including an extensive online library and forums for class participation. The flexibility within the courses means you can organise your study around your work and other commitments. Each course has its own “flavour” and the programme addresses a range of learning styles.

Principles of Veterinary Epidemiology
“.. if I’d have known what I know about the paper now... this would have been the FIRST paper I would have taken. This paper really gets down to the nitty gritty of not just being able to design a great research project, but also teaches you how to properly critically evaluate the literature. This is an invaluable skill for both me as a clinician, and (as of next year) a researcher!”

* Plan your 2016 study now – discretionary entry
For veterinarians whose institution or exam is not listed in the entry requirements on the MVM website, the MVM has an additional pathway to entry if you have:
- a veterinary degree that is not from one of the pre-approved universities
- a 6.5 IELTS score or equivalent

With this entry path you must first complete the MVM distance course Principles of Veterinary Epidemiology (offered in February 2016). See www.mvm.massey.ac.nz for more details. Principles of Veterinary Epidemiology must be completed prior to enrolling in Applied Veterinary Epidemiology.
Entry is subject to final approval by the Director of the MVM.
